Environment Regulations

Environmental Regulations

All our appliances comply with the latest EU directives. The Green Dot is for us a means of advertising, but again reflects our aspiration to make our contribution to environmental protection.

We regularly monitor the environmental impact of public testing institutes and get more current certificates. These can be requested from us.

Rohs Certificate = Restriction of (the use of certain) Hazardous Substances
The RoHS directive 2002/95/EG restricts (with exceptions) the use of six hazardous materials in the manufacture of various types of electronic and electrical equipment.

For Batteries

Batteries must be disposed properly.

The retail and communities provide appropriate container for disposal.

Battery notes

For normal storage, the temperature should be between +10° C and +25° C and +30° C never exceed. Extreme values of relative humidity (above 95% and below 40% relative humidity) for a long time must be avoided. Batteries should not be stored near radiators and boilers, even in direct sunlight.

It is advantageous to remove the batteries from a device that does not work satisfactorily or if it is not in use for long periods (eg, film camera, flash, etc.).

All batteries should be replaced at the same time. Newly purchased batteries should not be mixed with partially discharged. Batteries of different electrochemical systems, grades and trademarks should not be mixed.
